

Essential Tools & Softwares For A BIM Manager

Revit // **www.autodesk.com**

Revit is a BIM construction software that aims to solve different architectural and design problems. It was developed by Autodesk and is one of the most popular solutions in the AECO industry. Revit offers an intelligent approach to different stages of the construction process via models.

Autodesk BIM 360 // **www.autodesk.com**

Another software of Autodesk is BIM 360 software that works with construction management and project delivery. It helps unifies different processes of design, project and construction into one single process. With BIM 360 the entire lifecycle of your project can be managed.

Ideate // **www.ideatesoftware.com/**

Revit users who design, build, operate, and maintain built environments can streamline workflows with Ideate Software's Revit add-in applications, Ideate BIMLink, Ideate Explorer, Ideate Sticky, Ideate StyleManager, and IdeateApps.

UNIFI Labs // **www.unifilabs.com**

UNIFI is the essential cloud platform to manage digital building content. Over 40,000 users from leading AECO organizations across the globe leverage UNIFI to save designers an hour a day on average including Stantec, HDR, Kimley Horn, Chick-fil-A, Cupertino Electric, CRB, and PCL Construction.
